### **DETAILED ACTION**

1. Applicant's Amendment filed 05 January 2004 has been reviewed and placed of record in the file.

#### ***Allowable Subject Matter***

2. Claims 4-9 (to be renumbered 1-6) are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a multilayer wiring structure for semiconductor devices having all exclusive limitations as recited in claims 4 and 5, having at least one active region to receive an electric power from a power-supply source, power-supply lines on different levels of the multilayer wiring structure for supplying the electric power to the active region, and a common power-supply line between the power-supply source and the active region and connected to the power-supply lines, characterized in that the common power-supply line has a current-carrying capacity larger than that of each of the power-supply lines, and either that the common power-supply line is provided between the active region and the power-supply lines, or that both ends of the common power-supply line are connected to the power-supply lines.

In particular, it would have not been obvious to modify the multiple wiring structure of a typical spiral inductor having series and parallel interconnections of metal segments, as taught by the article listed in the PTO-1449 filed 05 January 2004, to have a common power-supply line with characteristics as claimed by the present invention.

Art Unit: 2818

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 5,723,908 to Fuchida et al. discloses and claims a multilevel wiring structure wherein parallel power metal line strips are skewed with respect to parallel signal power line strips.
